Nuclear Chemistry - An Introduction. Nuclear chemistry is the study of reactions that involve changes in nuclear structure. The chapter on atoms, molecules, and ions introduced the basic idea of nuclear structure, that the nucleus of an atom is composed of protons and, with the exception of  ${}^1_1\text{H}$ ,

## Answers

Notation and Isotopes  
Nuclear chemistry involves changes that occur in the nucleus of an atom. These changes in a nucleus often result in the release of great amounts of energy – much greater than the amount of energy released in any chemical reactions. You will recall that chemical reactions involve the formation and

nuclear equation is as follows:  ${}_{43}^{133}\text{Tc} \rightarrow {}_{44}^{133}\text{Ru} + {}_{-1}^0\text{e} + \gamma$ . The daughter isotope is carbon-12. Test Yourself. Write the nuclear equation that represents the radioactive decay of technetium-133 by beta particle emission and identify the daughter isotope. A gamma ray is emitted simultaneously with the beta particle.
