The disease triangle will almost certainly be an educational paradigm in the discipline of plant pathology for many years to come. One hopes the discussion here will enhance the educational value of the triangle and its variants. References: (1) Agrios, G. N. 2005. Plant Pathology (5th edition). Elsevier-Academic Press. San Diego, CA.

The Disease Triangle: A plant pathological paradigm revisited

A leaf spot is a limited, discoloured, diseased area of a leaf that is caused by fungal, bacterial or viral plant diseases, or by injuries from nematodes, insects, environmental factors, toxicity or herbicides. These discoloured spots or lesions often have a centre of necrosis or cell death. Symptoms can overlap across causal agents, however differing signs and symptoms of certain pathogens can ...

Leaf spot - Wikipedia

Verticillium wilt is a wilt disease affecting over 350 species of eudicot plants. It is caused by six species of *Verticillium* fungi: *V. dahliae*, *V. albo-atrum*, *V. longisporum*, *V. nubilum*, *V. theobromae* and *V. tricorpus*. Many economically important plants are susceptible including cotton, tomatoes,

At the end of their presentations, students must respond to a call for research (eg, simplified ANR type). Taking place from the first days of the start of the academic year, this annual edition of "Masteriales" allows a better group cohesion, a possible disinhibition and a confidence-building of the students.
