Downloadable (with restrictions)! The main task of a combined gas-water heat exchanger (CGHE) in a waste heat recovery system is to transfer heat from flue gas to boiler backwater. A spray tower and an indirect contact heat exchanger are key components of the CGHE. Analytical solutions of the heat and mass transfer process for the overall system are presented in this paper.

Recently, Chen and his colleagues proposed an analytical solution by using the shifting function method for the heat conduction in a slab with time-dependent heat transfer coefficient at one end. Yatskiv et al. studied the thermostressed state of cylinder with thin near-surface layer having time-dependent thermophysical properties.

[31,66,68,77,100,136,137,149] The Fourier law of conduction is $q = -k\nabla T$ (1.2) where q is the heat flux vector, $T(x)$ is the temperature field, and $k(T)$ is the coefficient of thermal conductivity. 1.2.1 Governing equation $\partial T / \partial t = \alpha \nabla^2 T + g$ (1.3) 1.2.2 Fins Fin effectiveness η_f : This is the ratio of the fin heat transfer rate to the rate that would be if the fin were not there.
