Conservation agriculture increases the capacity of agricultural households to adapt to climate change (high confidence) and can lead to increases in soil organic carbon over time, with quantitative estimates of the rates of carbon sequestration in drylands following changes in agricultural practices ranging between 0.04 and 0.4 t ha⁻¹ ...

Chapter 3 : Desertification — Special Report on Climate ...

Soil nutrient status is rarely a limiting factor to distribution. Nitrogen is very rarely limiting and trees have been noted to fix nitrogen under conditions of high pH (Singh, 1996), high salinity (Felker et al., 1981) and high water deficits (Felker et al., 1982). Other macronutrients can occasionally be limiting to growth either directly or ...
