Needle Jet

Removal How To

The needle jet is a very slight friction fit into the carb's body. To take it out, you first take a jeweler's small screwdriver and gently pry out the brass washer from the bottom of the jet. It should come out with little problem.

Does anybody have any tips or even a link to a video on how to remove the needle jet on a mikuni carb from a KTM SX 150 2018 Remove the main jet and the holder that the main screws into. It's has a 10mm bolt head and backs out just like a regular bolt. Now remove the top from the carb and pull the slide out.

position which is approximately 1/4 to 3/4 throttle opening.

The taper of the needle determines the amount of fuel. For example: the thinner the diameter of the needle, the more fuel will be drawn through the needle jet.

may be able to achieve the same result by changing the jet needle, and leaving the needle jet alone. I stand corrected if I'm misinformed as I was assuming that the Mikuni 40 was set up similar to the Mikuni 42 carb where only the jet needles can be changed for a different size and not the needle jet.

the jet needle is moving up and down and never leaves the needle jet's orifice all the way through wide open throttle. Thus with the VM the needle is in play through wide open throttle. • With the Amal, depending upon which groove the needle clip is in, the jet needle leaves the needle jet at about 3/4 throttle.
