Nitrazine Testing - Obstetrics

There is a 5 percent rate of false positive results using nitrazine tests, and 1 percent rate of false negative results. Nitrazine tests are administered by placing a few drops of collected vaginal fluid onto a strip of paper that has been treated with nitrazine dye. The color of the paper strip changes depending on the pH of the sample. The color is then matched on a chart that determines the corresponding pH of the sample. Results of the test can be read immediately.
