Abstract. Previous research has shown that intrusions are part of the psychopathology of mental disorders. Imagery techniques seem to be an effective treatment of negative intrusions. Since negative mental imagery is part of health anxiety, the present study investigated the impact of imagery techniques on health anxiety.

Introduction. Mental imagery is a cognitive task commonly used in daily life, during which, even in the absence of sensory stimulation, inner mental representations are activated and possibly determine an almost-perceptive experience .A special class of mental imagery is mental rotation - the ability to mentally rotate representations of two- or three-dimensional objects (e.g. shapes, letters ...

Studies have repeatedly found that mental imagery is effective in reducing stress and anxiety for competition; however it is unclear how individuals use the imagery because it has many different forms and situations it can be used in. Bernier and Fournier (2010) studied the effects of mental imagery on expert golfers and found that the golfers focused on different images depending on the environment, shot, psychological state, competition, and many other variables.
